Professional Summary

I am an Informatics Engineering student at Universitas Maritim Raja Ali Haji with a strong passion for software engineering, mobile application development, web technologies, manufacturing technology, and culinary innovation. Alongside my academic journey, I have built practical experience as a professional chef, developing discipline, leadership, teamwork, and operational problem-solving skills under demanding environments. Throughout my studies I have designed and developed multiple web and mobile applications ranging from tourism information systems, business management platforms, to mobile applications powered by public APIs. I enjoy transforming business problems into digital solutions with a focus on usability, scalability, and maintainable software architecture. My technical interests include full-stack development, REST API integration, database design, software architecture, and creating digital products that deliver measurable value for users and small businesses.

Core Competencies

- Full Stack Web Development
- Mobile Application Development (Flutter)
- REST API Integration
- PHP Native Development
- Node.js Backend Development
- SQL Database Design
- Git Version Control
- UI Implementation with HTML, CSS & JavaScript
- Software Requirement Analysis
- Business Process Digitalization
- Team Collaboration & Project Management

Technical Skills

Programming Languages: PHP, JavaScript, Dart, Node.js
Frontend: HTML5, CSS3, JavaScript, Flutter
Backend: PHP Native, Node.js
Database: MySQL, Firebase
Tools: Git, GitHub, VS Code, Android Studio, XAMPP, Postman
Deployment: GitHub Pages, Vercel

Selected Projects

Anime Hype

Developed a cross-platform Flutter application integrating an open-source Anime REST API to provide seasonal anime, upcoming releases, anime schedules, manga information, character profiles, and search functionality. The application demonstrates experience in API consumption, asynchronous programming, responsive mobile UI, and state management.

Jejak Pulau Bintan

Designed and developed a tourism information website using HTML, CSS, JavaScript, and PHP. The platform helps travelers explore destinations across Bintan Island through attraction information, destination ratings, and Google Maps integration, improving accessibility to local tourism.

Xplore Pinang

Co-developed a tourism platform focused on Tanjungpinang that presents culinary destinations, religious tourism, cultural heritage, and natural attractions. The project required extensive field research and content organization before deployment using Vercel and PHP.

PizzaAzura

Developed a digital ordering platform for a local MSME featuring WhatsApp ordering integration, inventory monitoring, sales analytics, order management, and financial reporting dashboard. Built using PHP, Node.js, and MySQL to improve operational efficiency and customer service.

Professional Experience

Professional Chef Working in a fast-paced commercial kitchen has strengthened my communication, leadership, adaptability, quality control, inventory management, and time management skills. These experiences complement my software engineering background by giving me a practical understanding of business workflows and operational efficiency.

Career Objective

Seeking opportunities as a Full Stack Developer or Mobile Application Developer where I can contribute to impactful software products, continuously improve my engineering skills, and build innovative solutions that bridge technology with real-world industries, particularly tourism, culinary businesses, and digital transformation.

Personal Statement

I believe technology should solve practical problems and create meaningful value. Every project I build reflects my commitment to continuous learning, clean implementation, and delivering user-centered digital experiences.
